Personality Adjustment and Psychosomatic Symptoms as Related to Nature of Job of Working Women
(Published in Dev Sanskriti University Journal, Vol 4, July 2006)

Prama Sharma

Abstract: An Attempt has been made in the present work to study the personality adjustment and development of psychosomatic symptoms as related to nature of job among working woman. A sample of 320 working woman was taken. The organizational role stress scale development Dr. Uday Parkin, PGI Health questionnaire by S.K Verma and personality adjustment inventory by C.P Sharma were used to study the various psychological parameters. The result show a significant relationship between nature of job and Psychological health of working woman.
